“Aid-niching in post-disaster recovery: the context of shared responsibility” (for submission)
1st paper:

Compare 4 timelines on the unravelling of Typhoon Haiyan:

1) Rappler (a social news network)
2) National Disaster Risk Reduction and Management Council (NDRRMC)
3) US Agency for International Development (USAID)
4) UN Office for Coordination of Humanitarian Affairs (UNOCHA)

Source: http://blog.childfund.org/tag/typhoon-haiyan/page/2/
Through the 4 timeliness, we observe the relief aid, support, and humanitarian actions taken by other institutions (besides the Philippine government), local and foreign, government and non-government that kept on adding as the real magnitude of the devastation became clearer.
“The confluence of focused and specialized provision of relief aid and services, voluntarily given and independently-determined by donor organizations, with the aid given depending mainly on the competence, resource, and/or advocacy of the donor agency” is ‘aid-niching’”
SUBJECT aspect
Who Receive Aid and Support

What aid and support are given to address needs

TERRITORY or AREA aspect
Where is aid and support given

2nd paper:

(1) analysis of secondary documents, such as government documents and media reports

(2) field observations of three resettlement communities, and

(3) inquiry on recovery perception from the viewpoint of the resettled survivors
Aid-niching in post-disaster recovery takes place within context of stakeholders’ concerted effort and coordination
DRAWBACKS of Aid-Niching:

1. Counter-productivity

2. Uneven development of areas that have suffered the same devastation
RECOMMENDATIONS

Recognize and incorporate roles of NGOs and local government units in 4 areas of the National Disaster Risk Reduction and Management Plan (2011-2028):

1) disaster prevention and mitigation
2) disaster preparedness
3) disaster response
4) disaster rehabilitation and recovery
